Nine answers at a glance

A recurring, privacy-safe decision report. Exact evidence remains separate from reconstructed history. Badges describe how far the current evidence can travel—not how interesting the question is.

Freshness gate: As of 2026-10-21, Decision Week 7 outcomes were retained exactly after waivers (31 complete, 159 failed), but are not scored because the matching immutable frozen pre-auction prediction panel is missing. Decision Week 5 remains the latest scoreable week; all nine answers and numbers in this report remain based on it.

1 Supported

Predicted-bid accuracy for top versus middle bidders/players

In the App W5 / decision W4 top-three target slice, top-five predicted bidders were not more accurate: claim-only MAE was $78.2 versus $45.5 for the deterministic middle five.

30 direct rows; 11/11 scored claims

2 Directional

What Likely/Possible/Unlikely predicts and whether narrower bands help

Likely/Possible/Unlikely was ordered for any canonical claim, but ranking managers only by predicted dollars did not improve discrimination: the exact top 25% claimed less often than the bottom 25%.

242 opportunities; any-claim rates 47.7% / 31.5% / 21.7%

3 Directional

Bidding after a prior expensive win

The direct reconstructed slice is descriptive and mixed; it does not support a causal claim that an expensive win suppresses the next auction.

5 reconstructed ≥$90 anchor wins

4 Directional

Aggressive versus actual winner/minimum by price tier

Aggressive was closest in the low tier, but the winner/Aggressive ratio changed sharply by tier; it is not one stable market multiplier.

10 exact App W5 / decision W4 targets $10+; cumulative reconstructed shown separately

5 Not enough evidence

Whether a nonlinear/tier-aware market-price curve fits better

Early exact sequencing exists but is still insufficient to validate a nonlinear, power-law, piecewise, or liquidity-aware curve.

1 reconstructed-prior → exact-later score; 0 exact-prior → exact-later pairs

6 Directional

Weekly #1–#5 price ladder and player-rank relationship

The top-five price ladder is visible, but a rank-to-price relationship is not yet comparable across weeks because exact auction-time player rank and liquidity are incomplete.

4 distinct auctions: 2 reconstructed + 2 exact

7 Supported

Claims per manager

23 same-manager alternatives sit on top of 84 canonical manager-target pairs; raw claim count therefore overstates independent bidding intent.

107 raw claims; 84 unique manager-target pairs

8 Not enough evidence

Positional need versus participation/amount

Positional need cannot be tested honestly from the retained evidence, including the requested Week 5 WR/QB slice.

0 time-aligned privacy-safe need snapshots

9 Directional

Whether prior-week top winners/bidders spend less next week

The linked canonical slice leans toward lower next-week winning spend, but repeated managers, zero-win weeks, and reconstructed prior history prevent a behavioral conclusion.

7/9 linked top-winner follow-ups had lower next-week winning spend; decision W5 follow-up evidence is exact

QUESTION 1 OF 9

1. Predicted-bid accuracy for top versus middle bidders/players

Supported

DIRECT ANSWER

In the App W5 / decision W4 top-three target slice, top-five predicted bidders were not more accurate: claim-only MAE was $78.2 versus $45.5 for the deterministic middle five.

KEY EVIDENCE / N

30 direct rows; 11/11 scored claims

The top-three targets were frozen pre-auction by Max VORP descending (102, 69, 50; alias tie-break). Errors exist only for explicit claims; non-bids remain missing, not $0.

PRACTICAL IMPLICATION

Use the ranking as a conversation starter, not proof that the highest projected manager will set the price. Keep feasible/capped values visible before judging willingness.

UNKNOWNS / NEXT EXACT DATA

Repeat this exact 30-row slice weekly. Retain median/high prediction bands prospectively; the current exact audit only retained source-supported top-credible and top-all bands.

Declared top three before outcomes

Selection: Max VORP descending; ties by SHA-256 of source player name with fixed gb-target-v1 prefix. Names are replaced by rank aliases before persistence.

Pre-auction rank	Target alias	Max VORP	Tie-break
1	Target 01	$102	Stable alias ascending after Max VORP
2	Target 02	$69	Stable alias ascending after Max VORP
3	Target 03	$50	Stable alias ascending after Max VORP

30 direct manager-target rows

Cohorts: Sort eligible predictions by predicted amount descending, then stable manager alias ascending; select five beginning at floor((n - 5) / 2). Error = predicted bid − explicit submitted amount. Claim-only MAE is descriptive. Non-bids have no amount and no error.

Target	Cohort	Manager	Likelihood	Predicted	Pre-waiver FAAB	Feasible / capped	Actual	Status / contingency provenance	Defined error	Censoring
Target 01	Top five	Manager 12	Unlikely	$265	$265	$265	$154	failed; canonical_failed_competitor; 1 raw claim; 0 alternatives; 0 roster-full; clearing-eligible	+$111 signed; $111 absolute	No

Median/high bands were not retained and are not backfilled. Full scoring mechanics remain in the appendices.

QUESTION 2 OF 9

2. What Likely/Possible/Unlikely predicts and whether narrower bands help

Directional

DIRECT ANSWER

Likely/Possible/Unlikely was ordered for any canonical claim, but ranking managers only by predicted dollars did not improve discrimination: the exact top 25% claimed less often than the bottom 25%.

KEY EVIDENCE / N

242 opportunities; any-claim rates 47.7% / 31.5% / 21.7%

Current exact evidence has 65 Likely, 108 Possible, and 69 Unlikely opportunities. Top/bottom 25% and 10% are shown for every preregistered threshold outcome; they are descriptive, not selected-and-scored cutoffs.

PRACTICAL IMPLICATION

Keep the three labels for coarse participation likelihood. Treat each row as a budget opportunity: available FAAB limits capacity, while a non-claim does not identify whether budget, roster capacity, or preference caused the outcome.

UNKNOWNS / NEXT EXACT DATA

Pre-register cutoffs, probability calibration, and an untouched later-week score set. Report both the all-opportunity view and a declared budget-feasible/censoring sensitivity using exact canonical status and pre-waiver FAAB.

Opportunity and censoring: denominators are manager-target opportunities, not only submitted claims. Pre-waiver FAAB bounds feasible spend; a non-claim does not reveal whether budget, roster capacity, or preference caused the outcome. This all-opportunity table is not a budget-feasible-only calibration.

Band	n	Any claim	Positive	≥ Max	≥ Safe	≥ serious median	≥ observed minimum	Heavy	Top-quartile amount	Calibration	Separation
Likely	65	31 (47.7%)	29 (44.6%)	14 (21.5%)	7 (10.8%)	15 (23.1%)	6 (9.2%)	11 (16.9%)	9 (13.8%)	No numeric probability retained	26.0 pp claim-rate
Possible	108	34 (31.5%)	33 (30.6%)	24 (22.2%)	14 (13.0%)	20 (18.5%)	4 (3.7%)	22 (20.4%)	10 (9.3%)	No numeric probability retained	9.7 pp claim-rate
Unlikely	69	15 (21.7%)	14 (20.3%)	11 (15.9%)	8 (11.6%)	9 (13.0%)	1 (1.4%)	10 (14.5%)	8 (11.6%)	No numeric probability retained	Reference
Top 25%	66	17 (25.8%)	17 (25.8%)	10 (15.2%)	6 (9.1%)	8 (12.1%)	2 (3.0%)	10 (15.2%)	4 (6.1%)	No numeric probability retained	-10.6 pp claim-rate
Bottom 25%	66	24 (36.4%)	22 (33.3%)	12 (18.2%)	6 (9.1%)	12 (18.2%)	3 (4.5%)	12 (18.2%)	8 (12.1%)	No numeric probability retained	Reference
Top 10%	33	6 (18.2%)	6 (18.2%)	4 (12.1%)	2 (6.1%)	2 (6.1%)	0 (0.0%)	4 (12.1%)	1 (3.0%)	No numeric probability retained	-6.1 pp claim-rate
Bottom 10%	33	8 (24.2%)	8 (24.2%)	6 (18.2%)	3 (9.1%)	6 (18.2%)	2 (6.1%)	5 (15.2%)	5 (15.2%)	No numeric probability retained	Reference

QUESTION 3 OF 9

3. Bidding after a prior expensive win

Directional

DIRECT ANSWER

The direct reconstructed slice is descriptive and mixed; it does not support a causal claim that an expensive win suppresses the next auction.

KEY EVIDENCE / N

5 reconstructed ≥$90 anchor wins

Managers winning for at least $90 in reconstructed Weeks 2–3 are followed individually into the next available week with raw/canonical claims, serious/heavy bids, wins, spend, normalization, same-position behavior, and censoring.

PRACTICAL IMPLICATION

Treat remaining budget as capacity and prior spend as context, not a manager-style coefficient.

UNKNOWNS / NEXT EXACT DATA

Link at least two more exact pre/post-waiver weeks with starting and pre-bid FAAB, roster state, contingencies, and same-position acquisition history.

Manager	Anchor	Following week	Raw / canonical	Serious / heavy	Wins / spend / max	Normalized activity	Same-position	Budget censoring	Latest-week behavior	Provenance
History manager 02	W2 win $99	W3	8 / 8	8 / 2	3 / $99 / $73	53.0% bid volume / starting FAAB; 8.4% mean bid / pre-bid FAAB	3	No observed heavy-threshold censoring	W5: 2 raw / 1 canonical; 1 serious; 1 heavy; 0 wins; $0 spend; 10.4% bid volume / starting FAAB; 23.7% mean bid / pre-bid FAAB; 0 same-position	Anchor Reconstructed; follow Reconstructed; latest activity W5 Exact
History manager 14	W3 win $234	No observed follow week	0 / 0	0 / 0	0 / $0 / —	0.0% bid volume / starting FAAB; —	0	No observed heavy-threshold censoring	W5: 0 raw / 0 canonical; 0 serious; 0 heavy; 0 wins; $0 spend; 0.0% bid volume / starting FAAB; 0.0% mean bid / pre-bid FAAB; 0 same-position	Anchor Reconstructed; follow Reconstructed; latest activity W5 Exact
History manager 07	W3 win $231	No observed follow week	0 / 0	0 / 0	0 / $0 / —	0.0% bid volume / starting FAAB; —	0	No observed heavy-threshold censoring	W5: 0 raw / 0 canonical; 0 serious; 0 heavy; 0 wins; $0 spend; 0.0% bid volume / starting FAAB; 0.0% mean bid / pre-bid FAAB; 0 same-position	Anchor Reconstructed; follow Reconstructed; latest activity W5 Exact
History manager 07	W3 win $187	No observed follow week	0 / 0	0 / 0	0 / $0 / —	0.0% bid volume / starting FAAB; —	0	No observed heavy-threshold censoring	W5: 0 raw / 0 canonical; 0 serious; 0 heavy; 0 wins; $0 spend; 0.0% bid volume / starting FAAB; 0.0% mean bid / pre-bid FAAB; 0 same-position	Anchor Reconstructed; follow Reconstructed; latest activity W5 Exact
History manager 16	W3 win $103	No observed follow week	0 / 0	0 / 0	0 / $0 / —	0.0% bid volume / starting FAAB; —	0	No observed heavy-threshold censoring	W5: 2 raw / 2 canonical; 1 serious; 0 heavy; 0 wins; $0 spend; 7.4% bid volume / starting FAAB; 14.3% mean bid / pre-bid FAAB; 0 same-position	Anchor Reconstructed; follow Reconstructed; latest activity W5 Exact

QUESTION 4 OF 9

4. Aggressive versus actual winner/minimum by price tier

Directional

DIRECT ANSWER

Aggressive was closest in the low tier, but the winner/Aggressive ratio changed sharply by tier; it is not one stable market multiplier.

KEY EVIDENCE / N

10 exact App W5 / decision W4 targets $10+; cumulative reconstructed shown separately

Fixed tier boundaries are high ≥$80, mid $25–$79, and low $10–$24. Weekly exact and cumulative reconstructed rows are separate views; the exact auction replaces the same decision-week reconstructed ladder row and is never pooled with it. Minimum-to-guarantee and derived runner-up-proxy MAE are both shown with their own n.

PRACTICAL IMPLICATION

Keep Aggressive labeled as an intrinsic scenario/threshold, not a calibrated winning-price forecast.

UNKNOWNS / NEXT EXACT DATA

Score the same fixed tiers on later exact weeks. Keep privacy-safe owner-directed and preregistered robust (ratio-gap/MAD/IQR) sensitivities explicit; never delete raw rows. The exact audit did not retain an independently identified runner-up, so that view is only observed minimum minus $1.

Do not pool these views: reconstructed decision-week and exact app-week views of the same auction remain separate. A runner-up proxy is derived as observed minimum − $1 because no independent exact runner-up identity/value was retained.

Scope	Tier	Boundary	winner n	minimum / runner-up n	Median winner / Aggressive	Q1–Q3	MAE vs winner	MAE vs minimum	MAE vs runner-up proxy
Exact app W5 (Sleeper decision W4)	High	winner ≥ $80	3	3 / 3	1.26	1.17–1.51	$58.7	$32.0	$31.7
Reconstructed cumulative W2–W4	High	winner ≥ $80	3	3 / 3	2.89	2.04–4.33	$125.0	$73.7	$74.0
Canonical exact decision W5	High	winner ≥ $80	1	1 / 1	1.67	1.67–1.67	$36.0	$28.0	$27.0
Exact app W5 (Sleeper decision W4)	Mid	$25–$79	4	4 / 4	1.78	1.09–5.54	$21.0	$12.5	$13.0
Reconstructed cumulative W2–W4	Mid	$25–$79	4	4 / 4	4.56	0.75–9.69	$25.8	$21.5	$21.5
Canonical exact decision W5	Mid	$25–$79	0	0 / 0	—	—–—	—	—	—
Exact app W5 (Sleeper decision W4)	Low	$10–$24	3	3 / 3	0.69	0.60–0.96	$8.0	$17.3	$18.3
Reconstructed cumulative W2–W4	Low	$10–$24	2	2 / 2	1.15	1.10–1.19	$2.0	$11.5	$12.5
Canonical exact decision W5	Low	$10–$24	0	0 / 0	—	—–—	—	—	—

Exact decision-W5 fixed-coefficient check

Target	c	n	MAE	Bias	Coverage
Winner	2.0	1	$46.8	$-46.8	0.0%
Observed minimum	2.0	1	$38.8	$-38.8	0.0%
Winner	2.5	1	$36.0	$-36.0	0.0%
Observed minimum	2.5	1	$28.0	$-28.0	0.0%
Winner	3.0	1	$25.2	$-25.2	0.0%
Observed minimum	3.0	1	$17.2	$-17.2	0.0%

This compact held-out check is analysis-only. The exhaustive coefficient × target × tier × sensitivity table is in Appendix C; production defaults are unchanged.

QUESTION 5 OF 9

5. Whether a nonlinear/tier-aware market-price curve fits better

Not enough evidence

DIRECT ANSWER

Early exact sequencing exists but is still insufficient to validate a nonlinear, power-law, piecewise, or liquidity-aware curve.

KEY EVIDENCE / N

1 reconstructed-prior → exact-later score; 0 exact-prior → exact-later pairs

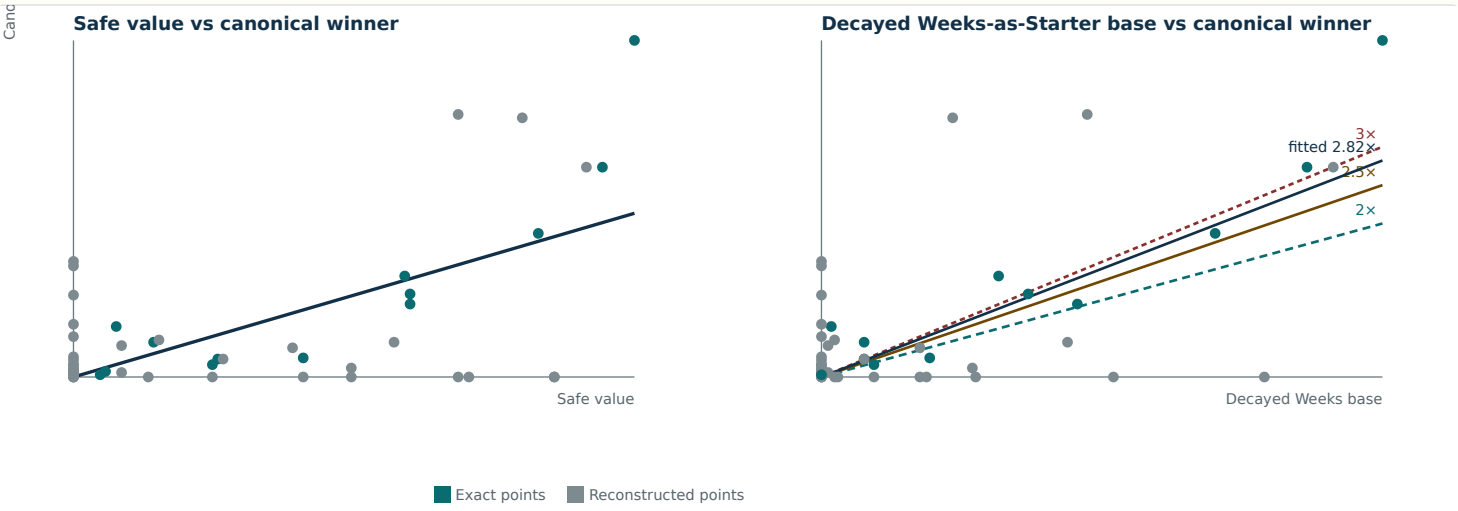

The reconstructed baseline has prior-week-fitted checks, and exact calibration visuals are now included, but the exact sequence is too short for a stable held-out claim.

PRACTICAL IMPLICATION

Do not change app formulas. Separate curve shape from weekly market scale when a valid exact train/test sequence exists.

UNKNOWNS / NEXT EXACT DATA

Capture candidate baselines, median remaining FAAB, active liquidity, week, winner, and minimum proxy before each auction; fit prior exact weeks only and score the next untouched exact week.

All distinct auctions are retained, including zero-model/high-price outliers. Lines are descriptive calibration aids, not production recommendations.

The chart uses each canonical auction once and preserves each point’s exact/reconstructed provenance. Held-out curve claims remain gated until multiple immutable exact-prior → exact-later pairs exist.

QUESTION 6 OF 9

6. Weekly #1–#5 price ladder and player-rank relationship

Directional

DIRECT ANSWER

The top-five price ladder is visible, but a rank-to-price relationship is not yet comparable across weeks because exact auction-time player rank and liquidity are incomplete.

KEY EVIDENCE / N

4 distinct auctions: 2 reconstructed + 2 exact

Each distinct auction shows the first through fifth winning bids and starting-FAAB shares with exact/reconstructed provenance. The exact App W5 / decision W4 ladder replaces reconstructed decision W4.

PRACTICAL IMPLICATION

Use the ladder to set market-scale expectations, not to claim a stable rank multiplier.

UNKNOWNS / NEXT EXACT DATA

Persist contemporaneous free-agent value rank, position, injury/bye, active-team count, median remaining FAAB, and total active liquidity for every target.

Auction label	Provenance	#1	#2	#3	#4	#5	Starting-FAAB shares	Context
Decision W2	Reconstructed	$99	$36	$31	$28	$26	19.8% · 7.2% · 6.2% · 5.6% · 5.2%	Transaction-ledger FAAB; contemporaneous player rank exists only inside the reconstructed snapshot.
Decision W3	Reconstructed	$234	$231	$187	$103	$73	46.8% · 46.2% · 37.4% · 20.6% · 14.6%	Transaction-ledger FAAB; contemporaneous player rank exists only inside the reconstructed snapshot.
App W5 / decision W4	Exact	$300	$187	$128	$74	$65	60.0% · 37.4% · 25.6% · 14.8% · 13.0%	Exact owner audit of App W5 / Sleeper decision W4 / provider transaction index 3 / playing W4. It replaces—not supplements—the reconstructed decision W4 ladder. Active-liquidity total was not retained.
Decision W5	Exact	$90	$2	—	—	—	18.0% · 0.4%	Canonical completed-waiver outcomes joined to the immutable exact pre-waiver projection snapshot.

QUESTION 7 OF 9

7. Claims per manager

Supported

DIRECT ANSWER

23 same-manager alternatives sit on top of 84 canonical manager-target pairs; raw claim count therefore overstates independent bidding intent.

KEY EVIDENCE / N

107 raw claims; 84 unique manager-target pairs

Exact post-waiver classification preserves canonical claims, duplicates/alternatives, zero-dollar tokens, roster-full failures, and unknown contingencies separately.

PRACTICAL IMPLICATION

Use canonical manager-target claims for participation and keep raw count as process/contingency context.

UNKNOWNS / NEXT EXACT DATA

One auction cannot define a manager's usual claim volume. Repeat per-manager distributions, quantiles, wins, and spend across exact weeks.

107
raw claims

84
unique manager-target pairs

Manager 24	7	6 / 6	1	6 / 3	1 / $74	0

Claims-per-manager distribution — App W5 / decision W4 owner audit

Metric	Min	P25	Median	P75	P90	Max
Raw claims	0.0	2.0	3.0	6.0	9.7	16.0
Canonical claims	0.0	1.8	3.0	5.3	6.7	8.0

Relation to wins/spend (descriptive)

Group	Managers	Mean canonical claims	Median canonical claims	Total wins	Total winning spend
Managers with ≥1 win	9	5.11	5.00	11	$879
Managers with 0 wins	15	2.53	2.00	0	$0
Top claim-volume quartile (canonical)	6	6.67	6.50	5	$362
Bottom claim-volume quartile (canonical)	6	0.67	1.00	0	$0

Cumulative context: No comparable cumulative claims-per-manager distribution is reported: generic W2–W4 rows are reconstructed and do not retain the exact canonical alternative/contingency classification used by this owner audit. W5 generic canonical rows are used only in the separate strategy/market sections.

A canonical claim is one manager-target competitive path after duplicate/alternative classification. Zero-dollar token claims, explicit roster-full failures, and unknown contingencies remain distinct and are never converted into clearing bids.

QUESTION 8 OF 9

8. Positional need versus participation/amount

Not enough evidence

DIRECT ANSWER

Positional need cannot be tested honestly from the retained evidence, including the requested Week 5 WR/QB slice.

KEY EVIDENCE / N

0 time-aligned privacy-safe need snapshots

The exact fixture has predictions, FAAB, and outcomes but no auction-time roster-need percentile, injury/bye state, or prior-acquisition control.

PRACTICAL IMPLICATION

Do not interpret a bid or non-bid as need. Modeled need and observed intent must stay separate.

UNKNOWNS / NEXT EXACT DATA

Before each auction capture top/bottom 10% and 25% need ranks by position, roster/injury/bye, player value, FAAB, manager baseline, and prior acquisitions; then report claim rate and conditional amount for players >$10.

Requested need slice	Available n	Participation	Conditional amount	Status / required control
Top 10%	0	—	—	Need snapshot absent
Bottom 10%	0	—	—	Need snapshot absent
Top 25%	0	—	—	Need snapshot absent
Bottom 25%	0	—	—	Need snapshot absent
Week 5 WR / QB, target >$10	0 valid linked rows	—	—	Capture position-specific need plus value, FAAB, injuries/byes, and prior acquisitions

QUESTION 9 OF 9

9. Whether prior-week top winners/bidders spend less next week

Directional

DIRECT ANSWER

The linked canonical slice leans toward lower next-week winning spend, but repeated managers, zero-win weeks, and reconstructed prior history prevent a behavioral conclusion.

KEY EVIDENCE / N

7/9 linked top-winner follow-ups had lower next-week winning spend; decision W5 follow-up evidence is exact

For each week's top three distinct winning managers (highest winning bid per manager), the table shows prior and next raw/canonical claims, serious/heavy bids, wins, spend, and exact/reconstructed provenance. Decision Week 5 follow-ups use the immutable exact snapshot. A no-win follow week contributes $0 winning spend but remains visible rather than disappearing.

PRACTICAL IMPLICATION

Use this only as a budget-monitoring cue; do not reduce forecasts mechanically after a win.

UNKNOWNS / NEXT EXACT DATA

Continue the same manager-linked table with exact weekly snapshots, remaining-FAAB-normalized bid amount, same-position activity, and explicit no-claim outcomes.

Week	Top winner	Winning spend	Winner provenance	Prior-week history / provenance	Next-week history / provenance

Week	Top winner	Winning spend	Winner provenance	Prior-week history / provenance	Next-week history / provenance
W5	History manager 16	$2	Exact	0 raw / 0 canonical; 0 serious; 0 heavy; 0 wins; $0 spend; 0.0% bid volume / starting FAAB; 0.0% mean bid / pre-bid FAAB; 0 same-position Reconstructed	0 raw / 0 canonical; 0 serious; 0 heavy; 0 wins; $0 spend; 0.0% bid volume / starting FAAB; 0.0% mean bid / pre-bid FAAB; 0 same-position No capture

Appendix A — My team this week

Outcome: one premium acquisition for $187 from $499 pre-waiver FAAB, leaving $312.

Process: 8 raw claims became 7 canonical claims. Three later claims were explicitly roster-full; that is sequencing evidence, not $0 competition.

Decision: the $187 acquisition cleared the $159 observed-minimum proxy and stayed below the $244 top-credible audit estimate. Preserve FAAB; fix contingency/drop paths before the next run.

Unknown: optimized lineup, injury risk, and remaining positional holes are not present in the privacy-safe evidence.

Appendix B — Methods, formulas, and scoreability

- **Signed error:** prediction − explicit submitted amount. Positive means overprediction.
- **MAE:** mean absolute error over scoreable explicit claims only. Non-bids and unknown amounts are excluded, never coded as $0.
- **Raw prediction R^2:** 1 − SSE/SST on unrefit predictions; it may be negative and is not fitted regression goodness-of-fit.
- **Fitted R^2:** belongs only to a declared fitted model. No exact nonlinear model is fit here.
- **Bootstrap:** prior report used deterministic cluster-aware resampling. Later exact scoring instances after reconstructed training = 1; exact-prior → exact-later pair count = 0, so exact confidence intervals are not promoted.
- **FAAB censoring:** feasible prediction = min(prediction, pre-waiver FAAB). Capacity and willingness remain separate.

Target	Max-VORP rank	Winner	Median band	High band	Top credible	Top all	Top-credible AE	Top-all AE
Target 01	1	$300	Not retained	Not retained	$215	$265	$85	$35
Target 02	2	$187	Not retained	Not retained	$165	$265	$22	$78
Target 03	3	$128	Not retained	Not retained	$144	$205	$16	$77
Target 04	4	$65	Not retained	Not retained	$123	$123	$58	$58
Target 05	5	$74	Not retained	Not retained	$86	$123	$12	$49
Target 06	6	$17	Not retained	Not retained	$98	$98	$81	$81
Target 07	7	$31	Not retained	Not retained	$74	$74	$43	$43
Target 08	8	$11	Not retained	Not retained	$70	$70	$59	$59
Target 09	9	$16	Not retained	Not retained	$35	$49	$19	$33
Target 10	10	$45	Not retained	Not retained	$49	$49	$4	$4
Target 11	11	$5	Not retained	Not retained	$6	$8	$1	$3

Median/high bands were not retained as deterministic privacy-safe slices and are not backfilled. Top-credible/top-all are scored because their pre-waiver values and exact winners were retained.

Strategy formulas retained from the prior report

Strategy	Deterministic definition
Max VORP	VORP-calibrated dollar value at the player-specific future active-team stage that maximizes value.
Middle VORP	VORP-calibrated dollar value at one shared horizon: max(4, ceil(active teams / 2)).
Current-team VoRP	VORP-calibrated dollar value at the current active-team count.
Corrected Safe	round(0.2 × position weight × positional premium × available budget); premium is 1.25 for rank 1, otherwise 1.1 × (replacement rank − rank) / (replacement rank − 1), floored at 0.
Corrected Weeks as Starter	Corrected Safe × projected starter weeks / weeks remaining, rounded and floored at 0.
Legacy Safe / Aggressive / Weeks as Starter	Archived production outputs replayed from the same snapshot by buildWaiverBoard; no post-outcome refit.

Legacy Aggressive	54	$28.4	$18.4–$39.6

Strategy	n wins	MAE	95% cluster-bootstrap MAE CI
Legacy Weeks as Starter	54	$27.1	$17.0–$39.1

Intervals use 2,000 deterministic resamples (seed 20260927) of player × processing-batch clusters, preserving correlated win/loss claims. They describe sampling variation in the reconstructed data and do not repair projection-history error.

Privacy-safe owner-directed exclusion sensitivity

View	Serious-market clusters	Closest	Max VORP MAE	Current-team VoRP MAE	Corrected Safe MAE	Corrected Weeks as Starter MAE
Without privacy-safe owner-directed marker	27	Current-team VoRP	$12.1	$11.9	$24.6	$15.1
With marked target retained	28	Current-team VoRP	$11.3	$11.1	$25.9	$14.9

Named owner-directed sensitivity: Monangai remains in the raw canonical rows. Only rows explicitly labeled “without privacy-safe owner-directed marker” exclude that one preregistered event; no raw row is silently deleted.

Formula/fit boundary: MAE = mean(|predicted − actual|); bias = mean(predicted − actual); Spearman ρ is Pearson correlation of average ranks; raw prediction $R^{2*} = 1 - SSE/SST$ on fixed strategy dollars. Only the rows explicitly labeled prior-week-fitted fit a scale, using the prior eligible reconstructed week and scoring the next. Exact nonlinear, tier, intercept, or liquidity models remain gated until multiple immutable exact prior→later pairs are available. Token threshold is ≤ max($1, 1% of original FAAB) = $5. Ratio-gap, MAD, and IQR filters are independent sensitivity flags, never silent deletions.

Appendix D — Exhaustive exact target table

Target	Rank	Max VORP	Safe	Aggressive	Winner	Minimum proxy	Raw / unique / alternatives / roster-full / token / unknown
Target 01	1	$102	$105	$171	$300	$244	22 / 20 / 2 / 0 / 0 / 0
Target 02	2	$69	$99	$148	$187	$159	23 / 17 / 6 / 0 / 0 / 0
Target 03	3	$50	$87	$120	$128	$108	19 / 15 / 4 / 1 / 0 / 0
Target 04	4	$30	$63	$78	$65	$41	6 / 4 / 2 / 1 / 0 / 0
Target 05	5	$30	$63	$63	$74	$56	17 / 11 / 6 / 1 / 0 / 0
Target 06	6	$24	$43	$33	$17	$4	3 / 3 / 0 / 0 / 1 / 0
Target 07	7	$18	$15	$13	$31	$8	2 / 2 / 0 / 0 / 0 / 0

Target 11	11	$2	$6	$0	$5	$1	2 / 2 / 0 / 0 / 1 / 0

Appendix E — Provenance and source-hash lineage

Weekly freshness gate: As of 2026-10-21, Decision Week 7 outcomes were retained exactly after waivers (31 complete, 159 failed), but are not scored because the matching immutable frozen pre-auction prediction panel is missing. Decision Week 5 remains the latest scoreable week; all nine answers and numbers in this report remain based on it.

Why Week 7 is unscored: the matching immutable frozen pre-auction prediction panel is missing. The public snapshot resolves only to Decision Week 5. **Unknown:** Decision Week 7 cannot be scored because no same-week immutable frozen pre-auction prediction panel exists; the public read-only snapshot endpoint resolves to the exact Decision Week 5 fallback.

Exact and reconstructed evidence classes remain separate. Hashes establish byte lineage; they do not make reconstructed snapshots exact.

Alias rules: Stable Manager NN labels assigned by SHA-256 digest order with a fixed private-to-report namespace; source names and digests are not retained. Max VORP descending; ties by SHA-256 of source player name with fixed gb-target-v1 prefix. Names are replaced by rank aliases before persistence.

Appendix F — Glossary

Canonical claim	One classified manager-target competitive path after duplicate and contingency handling.
Explicit non-bid	No submitted claim matched for that manager-target opportunity; it has no dollar amount.
Observed minimum proxy	One dollar above the highest observed clearing-eligible losing bid, where identifiable; not a true reservation price.
Token	A zero/near-zero claim retained separately from serious bidding.
Top credible / top all	Pre-waiver prediction bands retained by the exact audit; top all includes all modeled manager estimates.
Directional	A descriptive signal worth monitoring, not a validated reusable effect.
